

# RUSHIKESH KOLI

Java Full Stack Developer (3+ YOE)

Pune, India | +91 9579695273 | [rushikeshkoli87400@gmail.com](mailto:rushikeshkoli87400@gmail.com)

## PROFESSIONAL SUMMARY

---

- **3+ years** of experience in the **Java Full Stack Development**, Implementation, and Enhancement of Software Systems using **Java/J2EE** Technology and related frameworks along with **Spring Boot** as a back-end framework.
- Hands-on Experience in **Java, J2EE Technologies, Spring, Spring Boot, Spring MVC, Hibernate, Angular.js, React.js, Microservices, Git, Hibernate, JSP Servlets, JIRA and OOPs**.
- Has experience of working on multiple cloud technologies like **AWS** and **Azure** as well as experience in **DevOps (Docker, Kubernetes, CI/CD)**. which helps to take different approaches and perspectives towards problems.
- Fully aware of and involved in all phases of **SDLC (Agile)**. Having excellent analytical & problem solving skills.
- Good experience in live application **log analysis & bug fixing**.
- Having experience in **RESTful Web API Development** as well as **SOAP based Web Services**.
- Good knowledge in database technologies like **MySQL, PostgreSQL, Redis, and MongoDB**.
- Having experience in front-end technologies like **Angular, React.js, HTML, JavaScript, CSS, servlet and JSP etc**.
- Experience applying GOF **Design Patterns (Singleton, Factory Method, Adapter)** in Java projects.
- Having knowledge in **XML & Web Services**.
- Hands on experience in using **Eclipse, IntelliJ, VS code, STS IDE** for developing software applications.
- Always willing to innovate new things that can improve existing technology.
- Exposure to creating an **application/tool** from scratch.
- Experience on Build utilities like **Maven**.
- Ability to **learn new technologies** in minimal time period.

## TECHNICAL SKILLS

---

**Languages:** Java 8/11/17, Advanced Java, JavaScript

**Backend & Microservices:** Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, REST APIs, Microservices Architecture, Eureka, Open Feign, Zipkin, Kafka, Node.js

**Frontend:** Angular, React.js, HTML5, CSS3, JavaScript, Bootstrap, Tailwind CSS, JSX, AJAX

**Databases:** PostgreSQL, MySQL, Oracle, MongoDB, Redis, Amazon RDS

**Cloud & DevOps:** AWS, Azure, Docker, Kubernetes, CI/CD Pipelines, GitHub Actions, Jenkins

**Testing & Quality:** JUnit, Mockito, JaCoCo, Swagger

**Monitoring & Logging:** Log4j, ELK Stack

**Tools & IDEs:** Maven, Git, Postman, IntelliJ IDEA

## PROFESSIONAL EXPERIENCE

---

**Software Developer** | Fourise Software Solutions Pvt. Ltd.

*August 2025 – Current*

**Java Developer** | ProAzure Software Solutions Pvt. Ltd.

*June 2023 – July 2025*

## PROJECTS

---

**Project Name: Straight Through Abroad Remittance (STAR)**

**Client Name- ICICI Bank**

**Domain: Banking**

**Technologies:** Angular, Java, Spring Boot, Microservices, REST APIs, Hibernate, MySQL, AWS, Kafka, Redis, Git, Docker, CI/CD pipelines

**Description:** STAR (Straight Through Abroad Remittance) is an international money transfer platform developed for ICICI Bank that enables customers to transfer funds globally in 16 different currencies through a single unified platform. The application supports both ICICI Bank account holders and customers from other banks. ICICI Bank customers can directly access the Money to World (M2W) service through Net Banking for seamless international remittance processing. The platform consists of multiple modules, including M2W, Admin CBPPC, IMOBILE, and ADII, which help manage transaction processing, authorization workflows, audit tracking, and customer operations. The Admin CBPPC module provides transaction audit trails, transaction status monitoring, and branch-level authorization management to ensure secure and compliant international remittance processing.

**Roles And Responsibilities:**

- Designed and developed enterprise-level international remittance modules using Java, Spring Boot, Hibernate, and REST APIs for secure cross-border money transfer operations.
- Built and enhanced scalable backend APIs integrated with banking and transaction processing systems to support high-volume remittance transactions across 16 currencies.
- Developed secure transaction processing workflows and authorization modules for M2W and Admin CBPPC with role-based access and transaction monitoring features.
- Optimized MySQL database operations using efficient query handling, indexing, and Hibernate ORM for improved transaction processing performance.
- Implemented and tested RESTful services for transaction status tracking, audit trail management, and branch-level authorization workflows.
- Performed unit testing using JUnit to ensure code reliability, transaction accuracy, and application stability across banking workflows.
- Conducted performance and load testing using JMeter to analyze API response times and optimize high-frequency transaction handling.
- Worked with Git for version control, branch management, code merging, and collaborative development activities.
- Participated in CI/CD pipeline activities for automated build, testing, and deployment processes across development and QA environments.
- Enhanced frontend functionality using Angular, JSP, JavaScript, HTML, and CSS for improved customer experience and transaction handling workflows.
- Collaborated with cross-functional teams including QA, business analysts, and support teams in Agile/Scrum development cycles for feature enhancements and production support.

**Project Name:** Davita Care Management Platform

**Client Name-** New Jersey State Government.

**Domain:** Healthcare

**Technologies:** React.js, Java, Spring Boot, RESTful APIs, Hibernate, Microservices, MySQL, Kafka, AWS, Git, Docker

**Description:** The Davita Care Management Platform is an integrated healthcare solution designed to streamline care coordination, prior authorization automation, and population health management for patients, providers, and payers. The platform enhances operational efficiency by automating medical procedure approvals, integrating clinical data, and enabling real-time collaboration between healthcare entities. Built using a microservices-based architecture with Spring Boot, ReactJS, and RESTful APIs, the system ensures scalability, performance, and interoperability with EMR/EHR systems while maintaining compliance with HIPAA, HL7, and FHIR standards.

**Roles And Responsibilities:**

- Designed and developed scalable healthcare microservices using Java, Spring Boot, Hibernate, and RESTful APIs for care coordination, prior authorization, and patient management workflows.
- Built and enhanced responsive user interfaces using React.js, HTML5, CSS3, and Bootstrap to provide seamless experiences for patients, providers, and payers.
- Developed secure REST APIs for integrating clinical data, authorization workflows, patient records, and healthcare service coordination across multiple systems.
- Implemented microservices-based architecture to improve scalability, maintainability, and high availability of healthcare operations.
- Integrated healthcare interoperability standards such as HL7 and FHIR for seamless communication with EMR/EHR systems and third-party healthcare applications.
- Developed real-time event-driven communication using Apache Kafka for efficient data synchronization and healthcare workflow processing.
- Optimized MySQL database operations using Hibernate ORM, query optimization, and efficient data modelling for handling large healthcare datasets.
- Containerized microservices using Docker for consistent deployment, environment portability, and simplified application management.
- Implemented secure healthcare workflows and data protection mechanisms aligned with HIPAA compliance and healthcare security standards.
- Worked with Git for version control, branch management, code reviews, and collaborative development activities within Agile teams.
- Collaborated with frontend, QA, DevOps, and business teams to deliver healthcare features, resolve production issues, and improve platform performance.
- Participated in Agile/Scrum ceremonies including sprint planning, task estimation, daily stand-ups, code reviews, and release activities.
- Performed debugging, testing, and production support activities to ensure uninterrupted healthcare operations and system reliability.

## EDUCATION

---

**Bachelor of Engineering – Computer Science**

*Graduation Year: 2024*

Savitribai Phule Pune University, Pune, India | CGPA: 8.57 / 10.0
